

Quick And Easy Report Generation

Simple, Efficient and Repeatable Report generation for all users.

We all know how time consuming the report generation process can be. The TSI Flowreporter Software provides users with a platform to create professional reports, in a simple, efficient and repeatable manner. Our software speeds up the process by automatically filling in repeated information along with simplifying the way you plot your results, directly from the flowmeter's data.

Highlights

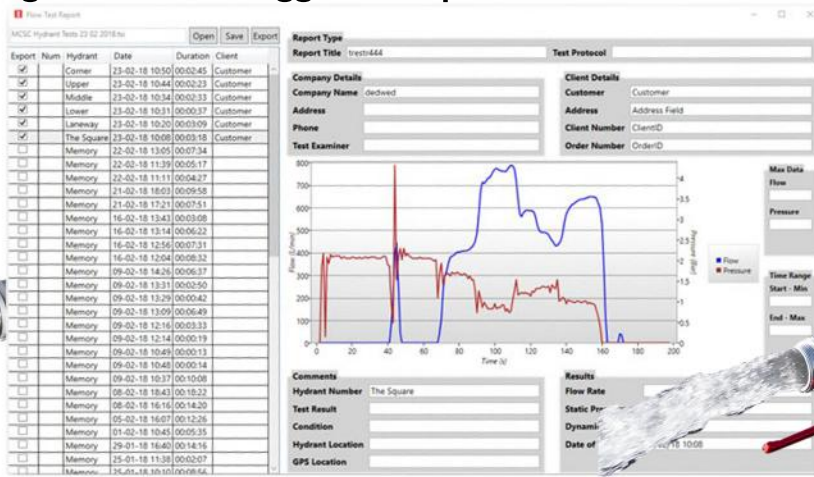

- Automated Professional Reporting
- Reports Tailored to Specific Customer Requirements
 - Fast & Efficient
 - Data Gathering
- Independent
- Transparent
- Credible
- Verifiable

Integrated Data Logger & Report Generation Software

The screenshot displays the software's interface, which includes a data table on the left, a report form on the right, and a central graph. The data table lists various test runs with columns for Export Num, Hydrant, Date, Duration, and Client. The report form contains fields for Company Details, Client Details, Address, Phone, and Test Examiner. The graph plots Flow Rate (blue line) and Pressure (red line) against Time (s). The flow rate starts at approximately 400 L/min, peaks at 800 L/min around 100 seconds, and then drops to 0. The pressure starts at approximately 4 bar, peaks at 8 bar around 100 seconds, and then drops to 0. The interface also includes a 'Test Protocol' section and a 'Results' section with fields for Hydrant Name, Test Result, Condition, Hydrant Location, and GPS Location.
